

SibFU named most cited university in Russia

Siberian Federal University, along with the National Research University — Higher School of Economics, named most cited University in Russia in 2016. The information was released by [Clarivate Analytics](#), formerly the Intellectual Property and Science business of Thomson Reuters, which focuses on Science and Intellectual property.

The compilers ranked the publications of 3 000 Russian scientific organizations from 21 research industries in the last 11 years.

The methodology of Clarivate Analytic is based on the main index — standardized average citing, which is ideal for comparing "Physics" with "Poetry", a major university and a small research institute, as well as showing how much better or worse in the world a work is cited. The correctness of the data has been observed through the use of world leading web platforms: [Essential Science Indicators](#) — database of the research analytics, and web-based system of research — Web of Science Core Collection.

The vice-rector for Research and International Cooperation of SibFU, **Sergey Verkhovets**: "The compilers ranked 2 053 publication of SibFU. Despite the university physics' largest number of papers — 602, biologists have the highest rank. So, the biggest citation — 6.46 — demonstrated the research teams under the leadership of Joseph Gitelzon and Nobel laureate Osamu Shimomura, Academician Yevgeny Vaganov, and professors Tatiana Volova and Mikhail Gladyshev."
